CAREER SUMMARY

Aspiring Software Engineer with hands-on full-stack development experience in React, Express, and PostgreSQL. Skilled at building scalable, user-focused applications with measurable business impact. Seeking a 12-month industrial placement (June 2026 – June 2027) to apply technical expertise, contribute to innovative teams, and grow as a software engineer.

EDUCATION

University of Portsmouth – Portsmouth, UK

BSc Computer Science | 2025 – 2027 (Expected)

- Achieved First Class (average 85%) across all first-year modules.
- Key Modules: Programming, Computer Architecture & Operating Systems, Database & System Design, Core Computing Concepts, Networks.

TECHNICAL SKILLS

- Languages: JavaScript (ES6+), Python, Dart, HTML5, CSS3
- Frameworks: React 18, Express.js, Node.js 18+, Flutter
- Databases: PostgreSQL, SQL
- Tools: Git, GitHub, Linux, VS Code, npm
- Practices: REST API Design, Responsive Design, Agile Development, Version Control, Code Review
- Learning: Docker, CI/CD, Unit Testing, AWS Cloud Deployment, DevOps Automation

PROJECTS

IESD Website – Bangladesh University of Engineering & Technology

<http://iesd.buet.ac.bd/> | GitHub: Private Repository

- Engineered full-stack architecture serving 500+ daily users.
- Developed admin panel with role-based authentication.
- Built ENCON Energy Conference module with paper submission, registration, and contact system.
- Delivered responsive UI improving load speed by 40%.
- Collaborated in an Agile setup with faculty stakeholders to deliver the platform.

Barbers on the Green – Booking & Payment Platform (In Progress)

Tech Stack: React, Express.js, PostgreSQL, Payment APIs

- Built booking system with real-time staff availability and payment integration.
- Added Klarna and Clearpay BNPL options.
- Designed admin dashboard for multi-location schedule and service management.
- Introduced subscription model increasing average customer spend by 20%.

Process Scheduler Web App

Live Demo | GitHub Repository

- Built an interactive CPU scheduling simulator implementing FCFS, RR, SJF, and SRTF algorithms.
- Designed Gantt chart visualizer with play/pause controls and real-time metrics.
- Added CSV import/export and local persistence for classrooms.
- Developed iteratively using agile principles and user feedback.

WORK EXPERIENCE

Full-Stack Developer – Department of Electrical & Electronic Engineering, BUET

Feb 2022 – Dec 2023

- Migrated legacy PHP systems to React/Express/PostgreSQL with zero downtime.
- Improved database efficiency by 33% through query optimization.
- Led and mentored a 3-developer team, conducting code reviews and sprint planning in an agile workflow.
- Built scalable departmental solutions in collaboration with faculty.
